

# Integration with Global Vehicle Telematics Devices

## Combined people and vehicle data for complete worker visibility.

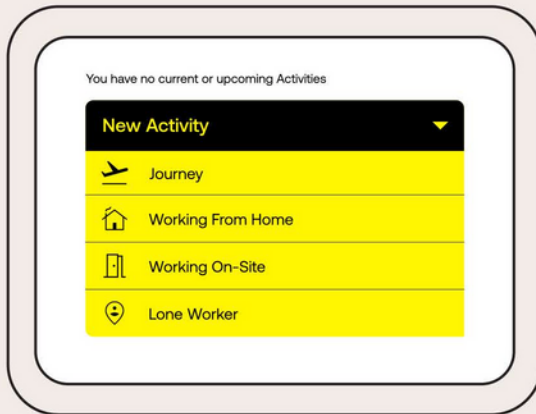

SafetyIQ and Vehicle Telematics, enables a seamless digitised Journey Management Plan for remote workers and a centralised dashboard for vehicle tracking.

- IVMS triggered escalation process
- Monitor workers from a centralised dashboard
- Real-time emergency response capabilities
- Time stamped audit logs

# How it Works

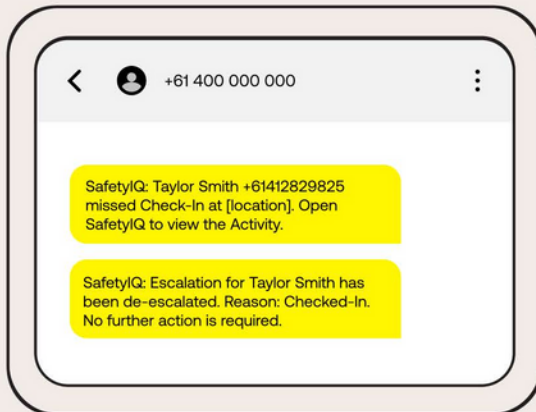

①

## Self-Managed Activities

Users create a Journey and the integrations seamlessly connects the tracked vehicle to the Journey.

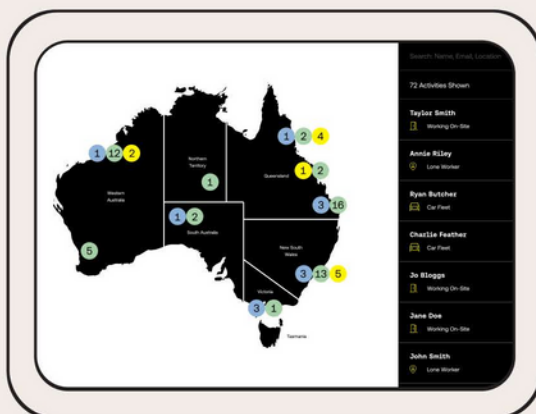

②

## Monitoring Activities

If the Journey Escalates, a Manager can use the centralised map to view the last known location of the vehicle.

③

## Dashboards & Analytics

Managers can search for tracked vehicles, creating a digital people movement board.
