PTToC Network Features

Wide Area Coverage

The TA-582 seamlessly connects to the extensive Telstra 3G/4G and 4GX cellular network, providing robust point-to-point communication across Australia.

Group Call (One to Many):

Users can effortlessly initiate group calls by selecting pre-programmed groups, enabling communication with all members simultaneously. Groups can be configured and added over air.

Individual Private Call (One to One):

With the TA-582, users can choose to engage in one-on-one private calls with specific radios or the Dispatcher, ensuring secure and confidential communication outside the group setting.

Text to Speech:

While the TA-582 lacks a visual LCD, it compensates with Text-to-speech functionality, ensuring that important information is audibly communicated to users.

Internal GPS Engine:

The internal GPS engine of the TA-582 enhances operational efficiency by reporting its position to the Dispatcher every 30 seconds (programmable). This feature provides real-time location data for effective coordination.

Dedicated SOS:

Equipped with a dedicated SOS button, the TA-582 enhances user safety. When held for 3 seconds, the SOS button triggers alerts to all other units, indicating the user's location on the Dispatcher's map display. This feature is crucial in emergencies, ensuring swift response and assistance.

Introducing our latest addition to the PTT Radios family—the TA-582. This user-friendly and robust radio offers a cost-effective solution to meet numerous communication needs.

Powered by a high-capacity 5000mAh battery and featuring enhanced low power consumption, the TA-582 boasts an impressive two-day operational span on a single charge. With the TTS (Text to Speech) engine, critical information such as group selection, battery level, and incoming messages are audibly announced, eliminating the need for a visual LCD screen.

The TA-582 package includes a convenient desktop drop-in charger and a 240v plug pack. Moreover, it supports versatile charging options, including a 5v USB cable for in-vehicle charging.
